

Water Committee Report

12 September 2026

William James, Water Committee Chair, PSA Vice President

During the last four months, 133 days (April 23th to September 3rd), our well pumps pumped a total of 25,574,973 gallons out of the ground.

35 accounts exceeded their allotment. The highest usage was 17,528 cubic feet (131,119 gallons), averaging 1,957 gallons per day.

19 accounts are past due, and four are pending service suspension. One account is suspended.

Our five water system reserve CDs have gained a total of \$14,432.40 for the months of since purchase at the end of December.

Members are urged to turn off their water at the meter if they intend to leave for an extended period. Turning off your water will help prevent leaks and Thousands of dollars in water charges and possible costly repairs.

There was one water system incident last month where we had a power fault on the booster pump controllers and it took them offline during the weekly generator test. Members contacted NorthWest Water and they dispatched a nearby technician who reset the controllers and restored water system pressure within about an hour. We have had no other faults since. I continue to monitor the system via the monitoring software daily.

I encourage people to contact myself or NorthWest Water if they experience any water system problems. If I am unavailable immediately contact NorthWest Water.

I encourage members to volunteer in supporting the water system by receiving some system training and operational experience to respond to systems casualties. Specifics can be discussed offline with interested parties.
